

Passing Property Value Between Requests

Thursday, November 10, 2016 3:57 PM

```
import groovy.json.JsonSlurper

def response1 = context.expand( '${Request1#Response}' ).toString()
log.info response1

def jsonString=response1
log.info jsonString

// Parses JSON text content into Groovy data structures (objects)
JsonSlurper serializer=new JsonSlurper()
def object = serializer.parseText(jsonString)

log.info(object.results.address_components.long_name)

def longNamesList = object.results.address_components.long_name
def newAddress = longNamesList[0][0]

def toRequest = testRunner.testCase.getTestStepByName("Request2")
toRequest.setPropertyValue("address", newAddress)
```
